

Lab Task

A department wants a webpage that displays all student records stored in a database. The goal is to help staff view student information in a tabular format without editing or deleting records.

Task Requirements

Database Requirements

Create a database `student_records` with table `students`:

- `id`
- `name`
- `registration_no`
- `program`

Application Requirements

- Connect PHP to MySQL
- Fetch all records using `SELECT *`
- Display records in an HTML table
- Show message if no records exist
